RISE Internship
Web Development
Project List

Tools:

- HTML
- CSS
- JavaScript
- Bootstrap / Tailwind CSS
- Git

Project 1: Industry-Oriented Responsive Business Website Development

Problem Statement:

Many small businesses and startups lack a professional online presence or use outdated, non-responsive websites. Poor website design affects credibility, user engagement, and lead generation. Industry requires developers who can build responsive, modern business websites.

Objective:

To design and develop a fully responsive business website that works seamlessly across desktop, tablet, and mobile devices.

Requirements:

- Business or startup website concept
- Website sitemap and page structure
- Responsive layout using CSS frameworks
- Navigation bar and footer design
- Home, About, Services, and Contact pages
- Form handling using JavaScript

- Basic SEO-friendly structure
- Cross-browser compatibility
- Deployment-ready website
- Project documentation

Expected Outcome:

- Hands-on experience with core web technologies
- Strong beginner-to-intermediate web development portfolio project
- Understanding of responsive design principles
- Job relevance for Web Developer, Frontend Developer, Junior Software Engineer roles

Tools:

- HTML
- CSS
- JavaScript
- Bootstrap / Tailwind CSS
- Git

Project 2: Industry-Oriented Landing Page Development for Marketing Campaigns

Problem Statement:

Marketing campaigns fail when landing pages are slow, cluttered, or not conversion-focused. Businesses need high-performing landing pages to capture leads and drive user actions. Industry requires web developers who can build optimized, conversion-friendly landing pages.

Objective:

To design and develop a high-conversion landing page for a product, service, or campaign.

Requirements:

- Campaign or product selection
- Clear page goal definition
- Hero section with call-to-action
- Responsive layout design
- Lead capture form implementation
- Basic animations and interactions
- Performance and page load optimization
- SEO-friendly HTML structure
- Cross-device compatibility
- Project documentation

RISE Internship
Web Development
Project List

Expected Outcome:

- Hands-on experience with conversion-focused web design
- Strong landing page portfolio project
- Understanding of UI and UX for marketing
- Job relevance for Web Developer, Frontend Developer, Digital Marketing Web Specialist roles

RISE Internship
Web Development
Project List

Tools:

- HTML
- CSS
- JavaScript
- Bootstrap / Tailwind CSS
- Git

Project 3: Industry-Oriented Interactive Portfolio Website Development

Problem Statement:

Students and professionals struggle to showcase their skills effectively using resumes alone. Static portfolios fail to engage recruiters. Industry expects developers to build interactive portfolio websites that highlight skills, projects, and achievements.

Objective:

To design and develop a personal portfolio website with interactive features that professionally presents skills and projects.

Requirements:

- Personal branding and content planning
- Responsive portfolio layout
- Projects showcase section
- Skills and experience section
- Interactive animations and hover effects
- Contact form integration

RISE Internship
Web Development
Project List

- Basic SEO optimization
- Cross-browser compatibility
- Deployment-ready website
- Project documentation

Expected Outcome:

- Hands-on experience with interactive frontend development
- Strong portfolio website project
- Understanding of personal branding through web design
- Job relevance for Web Developer, Frontend Developer, Junior UI Developer roles

Tools:

- HTML
- CSS
- JavaScript
- Bootstrap / Tailwind CSS
- Git

Project 4: Industry-Oriented E-Commerce Website Frontend Development

Problem Statement:

Many e-commerce platforms fail due to poor frontend experience, slow navigation, and confusing product layouts. Users abandon carts when websites are not user-friendly. Industry requires developers who can build clean, responsive, and intuitive e-commerce frontends.

Objective:

To design and develop a responsive frontend for an e-commerce website that enhances user experience and product discovery.

Requirements:

- E-commerce website structure planning
- Responsive product listing page
- Product detail page design
- Shopping cart UI design
- Navigation and category filtering
- Interactive buttons and hover effects

RISE Internship
Web Development
Project List

- Basic JavaScript-based cart logic
- Cross-device compatibility
- Deployment-ready frontend
- Project documentation

Expected Outcome:

- Hands-on experience with e-commerce frontend development
- Strong industry-relevant web portfolio project
- Understanding of user-centric design for online shopping
- Job relevance for Web Developer, Frontend Developer, E-Commerce Web Developer roles

RISE Internship
Web Development
Project List

Tools:

- HTML
- CSS
- JavaScript
- Bootstrap / Tailwind CSS
- Git

Project 5: Industry-Oriented Dynamic Web Application Using JavaScript

Problem Statement:

Static websites cannot handle dynamic user interactions such as data updates, filtering, and real-time feedback. Businesses require interactive web applications to improve user engagement. Industry expects developers to build dynamic behavior using JavaScript.

Objective:

To develop a dynamic web application that responds to user actions and updates content in real time using JavaScript.

Requirements:

- Application use case definition
- DOM manipulation using JavaScript
- Form validation and user input handling
- Dynamic content rendering
- Client-side data storage

RISE Internship
Web Development
Project List

- Interactive UI components
- Error handling and feedback messages
- Cross-browser compatibility
- Deployment-ready application
- Project documentation

Expected Outcome:

- Hands-on experience with JavaScript-driven applications
- Strong dynamic web project for portfolio
- Understanding of client-side logic
- Job relevance for Web Developer, Frontend Developer, JavaScript Developer roles

RISE Internship
Web Development
Project List

Tools:

- HTML
- CSS
- JavaScript
- Bootstrap / Tailwind CSS
- Git

Project 6: Industry-Oriented Form-Based Web Application with Validation and User Feedback

Problem Statement:

Many business websites collect user data through forms, but poor validation and unclear feedback lead to errors and low submission rates. Industry requires web developers who can build reliable, user-friendly form-based applications.

Objective:

To develop a form-based web application with proper validation, error handling, and user feedback.

Requirements:

- Form use case definition
- Responsive form UI design
- Client-side validation using JavaScript
- Real-time error and success messages
- Input sanitization
- Form submission handling

RISE Internship
Web Development
Project List

- Basic data storage or display
- Cross-browser compatibility
- Deployment-ready application
- Project documentation

Expected Outcome:

- Hands-on experience with form handling
- Understanding of usability and validation principles
- Industry-ready web development portfolio project
- Job relevance for Web Developer, Frontend Developer, Junior Software Engineer roles

Tools:

- HTML
- CSS
- JavaScript
- Bootstrap / Tailwind CSS
- Git

Project 7: Industry-Oriented Web Dashboard for Data Visualization

Problem Statement:

Businesses need quick visibility into key metrics, but static pages fail to present insights clearly. Without dashboards, decision-making becomes slow and error-prone. Industry requires web developers who can build clean, interactive dashboards.

Objective:

To design and develop a responsive web dashboard that displays key data metrics in a clear and interactive manner.

Requirements:

- Dashboard use case definition
- Responsive layout design
- Data display using cards and tables
- Basic charts using JavaScript
- Interactive filters or controls
- Real-time UI updates

- Consistent visual hierarchy
- Cross-browser compatibility
- Deployment-ready dashboard
- Project documentation

Expected Outcome:

- Hands-on experience with dashboard-style web apps
- Strong data-visualization web portfolio project
- Understanding of information hierarchy on the web
- Job relevance for Web Developer, Frontend Developer, UI Developer roles

RISE Internship
Web Development
Project List

Tools:

- HTML
- CSS
- JavaScript
- Bootstrap / Tailwind CSS
- Git
- Deployment Platform

Project 8: Industry-Ready End-to-End Web Application for Business Use

Problem Statement:

Many learners build small web pages but lack experience creating complete, real-world web applications that combine layout, interactivity, responsiveness, and deployment. Industry expects developers who can deliver end-to-end web solutions ready for production use.

Objective:

To design and develop a complete web application that solves a real business problem using core web technologies.

Requirements:

- Business use case definition
- Multi-page website structure
- Responsive UI implementation
- Interactive features using JavaScript
- Form handling and validation
- Reusable components and clean code structure

RISE Internship
Web Development
Project List

- Basic performance optimization
- Cross-browser testing
- Live deployment
- Complete project documentation

Expected Outcome:

- End-to-end experience with real-world web development
- Strong industry-grade web development capstone project
- Confidence in building production-ready websites
- Job relevance for Web Developer, Frontend Developer, Junior Software Engineer roles
